

## Information Security at INTEC International GmbH according to ISO 27001

As provider of solutions for Industry 4.0 it is even more important for us to protect your data. That is why we have set up our most important points on data security for you here.

### CLASSIFICATION OF INFORMATION

All customer data and information are classified as "secret information" and therefore enjoy the highest security standards in every respect.

### NETWORK ARCHITECTURE

Your data is stored locally in the headquarters of INTEC International GmbH on a Raid-System.

### ACCESS CONCEPT

The client information can only be accessed by employees who are directly working on the project.

### BACKUP STRATEGY

To better safeguard your data we make regular backups.

### IT SECURITY

Our IT system is protected with high security standards against external attacks and software damage as well as against data loss.

### BUILDING SECURITY

The offices of INTEC International GmbH are protected against admission and outside insight.

ISO 27001 is the leading international standard for information security management systems (ISMS) and the most important cyber security certification. Certification can minimize IT risks and implement IT security procedures that help optimize sustainable system quality.
