

The company

INTEC International GmbH is a cross-sector IT consulting and system house that since 1979 helps well-known and internationally operating companies from mechanical and plant engineering, the automotive industry and the energy industry. In the area of network communication in particular, we offer innovative hardware and software solutions and services for system automation. INTEC International offers everything you need for machine data acquisition and remote service for added value.

Products and Services

Our products of the MEP® series enable data acquisition, data transfer and remote Maintenance as a flexible embedded system for machines, plants and technical systems.

They allow preventive Maintenance and, in the event of a malfunction, simple, quick and easy remote access via a secure internet connection as a cyber secure remote service.

Sectors

Machine and plant construction, building technology, energy technology, environmental technology, and others.

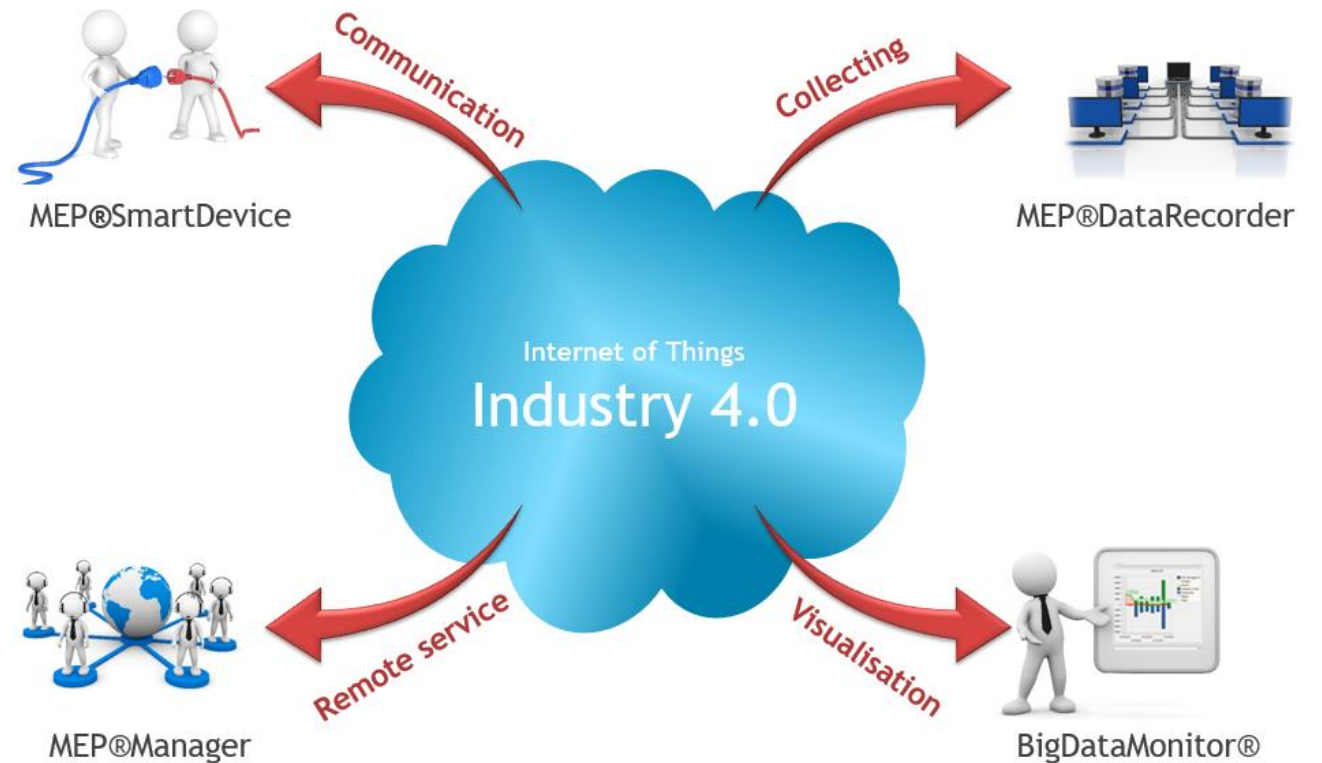

INTEC – Solutions for the Industry 4.0

We offer innovative hardware and software solutions and services for system automation, particularly in the area of network communication. The conception, development and adaptation of interfaces and protocols for process, quality and traceability data based on various standards complement our portfolio. Our top-products:

- MEP® for data collecting and remote service of industrial plants and machines
- Material flow calculator(MFR)
- Embedded Systems (Jack and air suspension control)
- BigDataMonitor® for data visualisation from *Hammacher Datentechnik GmbH*

Worldwide access for a faster and safer problem solving

- Cyber-Security ISO 27001:2013
- Time savings through real-time access and service
- Travel cost savings
- Resource optimisation
- High transparency over ongoing activities

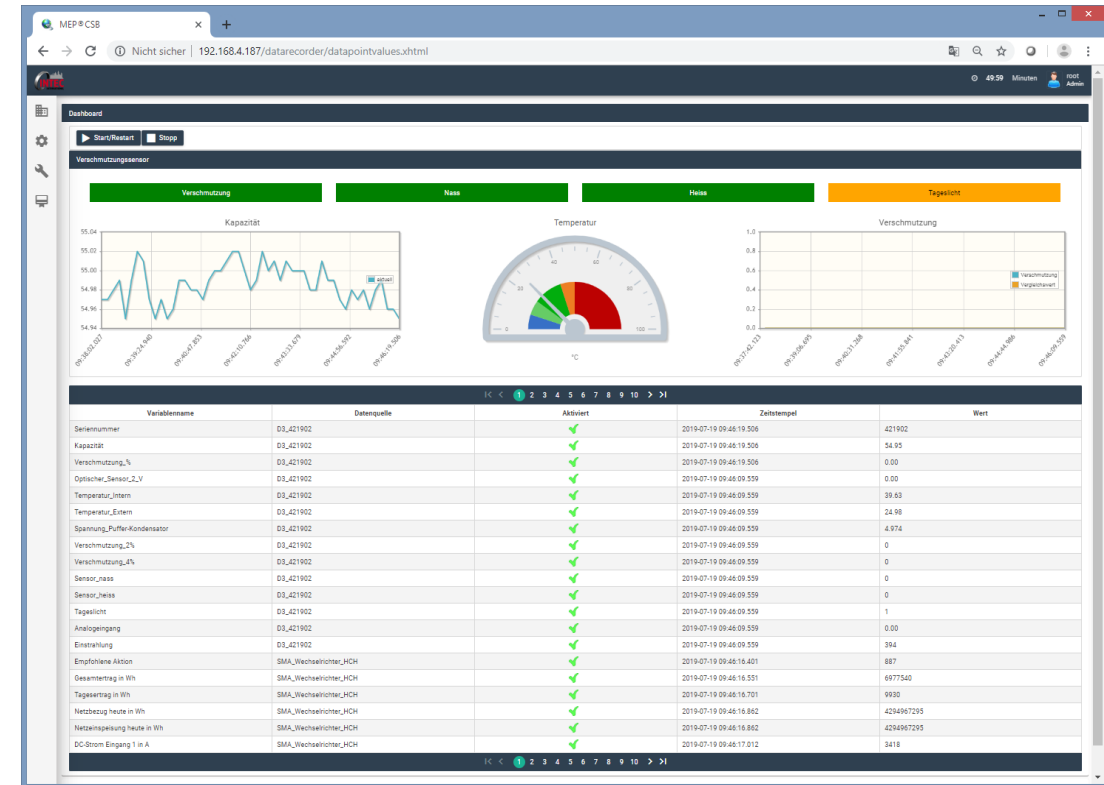

Collected data are valuable information

With MEP®DataRecorder it is possible to record and collect data in a quick and easy way, from machine PLC, digital and analogue sensors, as well as from other type of sources.

On this basis, the product allows to monitor all the important information, such as energy consumption, temperature, humidity and the number of pieces produced. Thus, the employee can detect variations or irregularities and consequently act before it results in defects or failures.

MEP®SmartDevice

Your universal solution to read and send machine data

The MEP®SmartDevices are embedded industrial PC composed of add-on modules which are extensible to other different interfaces to communicate with machines.

Our Basis-Hardware is universal, to be used with all kind of machine, regardless of seize or year of production.

In combination with the **MEP®Manager**, MEP®SmartDevice allows remote access into the machine, through which it is possible to change the set up of both.

In combination with **MEP®DataRecorder**, MEP®SmartDevice is able to communicate the exact and actual condition of the machine.
